

Wednesday Session 6

Theme: “Current status in decommissioning and environmental restoration” -

Hydro Quebec “Hydro Québec experience with safe shutdown and decommissioning”

The decision to close Hydro Quebec’s Gentilly-2 Nuclear Generating Station led to the first “modern” decommissioning of a nuclear power plant in Canada. Although other plants have been in safe storage for many years, the Panel discussion on this ongoing decommissioning project provides an opportunity for the industry to hear and ask questions about the practical realities of managing technical, personnel, and financial issues associated with a decommissioning in Canada.
